

**SECTION SIX**

**COMPILATION OF MITIGATION INITIATIVES**

This section of LMS contains the compilation of the mitigation initiatives that are the result of the earlier planning efforts by the Task Force. Typically, they will involve strengthening a structure against a hazard, elevating a structure above a flood hazard, relocating a structure away from a hazard, or removing the structure all together to avoid further damage. In addition, mitigation initiatives can be designed as local government actions or activities designed to reduce further exposure to hazards through policy, hazard information, or incentive.

**THE PLANNING PROCESS**

Found in Table 6.1 is a complete listing of the current mitigation initiatives for the county sorted by their Priority Scores. Contained in the list are Project Description, Project Type, Jurisdiction, Lead Agency, Hazard, Priority Score, Date Proposed, Potential Funding Source, LMS Goal, Estimated Cost and Status.

### Mitigation Initiatives Priority Score Process

Next, the initiatives are listed in Table 6.3 by the priority score assigned to each as a result of the common process to characterize and prioritize mitigation initiatives that is used by all participants in the planning process. This priority score is a long-term characterization value directly associated with each specific initiative based on its own merits at the time it was first proposed by the individual participant. The priority is intended to serve as a guideline for the Task Force regarding the relative desirability of implementation of a specific mitigation initiative in relation to the other proposed initiatives incorporated into the plan. Table 6.3 also provides the breakdown of the priority scores by criterion, including an estimated number of people who will benefit and cost to implement each initiative. These scores have been assigned according to the knowledge and discretion of the Task Force considering orders of magnitude not exact technical estimates.

Mitigation initiatives with higher point totals have higher priority. However, it would be a mistake to assume that only top priority initiatives should be considered for funding. High priority projects often require significant resources or money. In a post-disaster situation, for example after a hurricane, the amount of money available for hazard mitigation projects could be as little as \$30,000 or as much as \$1 million or more. Therefore, it is important to have initiatives with a range of costs that are rationally prioritized so that the jurisdictions can get the most value for the mitigation money they receive. Furthermore, simply because a mitigation initiative has high associated costs does not mean it is not cost effective. An initiative may yield significant benefits over the lifetime of the project that far outweighs the initial costs. In lieu of conducting formalized benefit-cost analyses, order of magnitude cost estimates were made by the Task Force assuming that less expensive projects would be easier to obtain funding for and could be implemented more readily.

The mitigation initiatives were assigned priority scores based upon the following criteria according to the county's goals for local mitigation and the program funding requirements of FEMA:

- Number of people (from 1 to 10,000 or more) who will benefit.
- The risk rating, according to the community, for the addressed hazard.
- Immediate need or post-disaster priority.
- Enhancement of special needs population or promotion of hazard awareness.
- Reduction of risk to structures that have been repetitively damaged.
- Critical facility or infrastructure.
- Environmentally sound.
- Technically feasible.
- Cost effective.

- Encourage cooperation among government entities.

Table 6.2 shows the point awarding system for establishing a priority score for each mitigation initiative. The maximum priority score is 100.

**Table # 6.2** **Priority Scoring for Mitigation Initiatives**

Criteria Number	Criteria	Category	Scoring
# 1	Number of people who will benefit	10,000 or more	10
		1,000 or more	8
		100 or more	6
		10 or more	4
		1 or more	2
# 2	Risk rating of addressed hazard	40 or more	10
		30-39	8
		20-29	6
		10-19	4
		Less than 10	2
# 3	Immediate need or post-disaster priority	Yes	10
# 4	Enhancement of special needs population or promotion of hazard awareness.	Yes	10
# 5	Reduction of risk to structures that have been repetitively damaged.	Yes	10
# 6	Environmentally sound.	Yes	10
# 7	Critical facility or infrastructure.	Yes	10
# 8	Technically feasible.	Yes	10
# 9	Cost effective.	Yes	10
# 10	Encourage cooperation among government entities.	Yes	10

Note: Projects in the “No” category receive a score of 0 for that criterion.

## Completed Mitigation Initiatives

The implementation of the mitigation initiatives proposed as a result of the Task Force’s planning process is an important measure of the progress in implementation of the LMS. As the participants in the planning are able to implement more and more of the proposed initiatives that have been incorporated into the plan, the facilities, systems, and neighborhoods of the county can become more and more resistant to the impacts of future disasters. Table 6.4 lists the previous mitigation initiatives that have been completed at the time of the approval of the LMS. Additionally, some initiatives listed below were eliminated at the time of the approval of this plan.

**Table # 6.4**

**Completed Mitigation Initiatives**

Initiative Description	Date Proposed
<b>Jackson County (unincorporated)</b>	
Mitigate the flooding problem on County Road 276.	1999
Construct a new state of the art county Emergency Operations Center.	2004
Purchased and distributed 2,400 NOAA Weather Radios to county residents.	2004
<b>Alford</b>	
Purchase and install generator to provide un-interrupted electrical power for the town’s water supply.	1999
<b>Cottondale</b>	
Mitigate the flooding problem on Corbin Road.	1999
<b>Graceville</b>	
Mitigate the flooding problem on Sixth Avenue.	1999
<b>Greenwood</b>	
Increase water pressure for fire suppression by elevating the water tower.	2004
<b>Jacob</b>	
Purchase and install generator to provide un-interrupted electrical power for the town’s water supply.	1999

## Removed Mitigation Initiatives

During the review and revision of the LMS no mitigation initiatives were removed from the listing.

## Mitigation for New Buildings and Infrastructure

Many of the mitigation projects created by the Task Force attempt to remedy the vulnerability of existing buildings and infrastructure to current hazards. However, initiatives have been included to reduce the effects of hazards on new buildings and infrastructure. For example, the county would like to draft a site alteration ordinance designed to minimize the stormwater flooding of off-site properties. Hopefully, this initiative will be a positive step towards mitigating non-point pollution for the county's many water bodies, reduce runoff and decrease damage to buildings. In addition, the entire county is undertaking initiatives to provide hazard awareness materials and disaster planning workshops to new residents, contractors and builders. This effort may lead to greater preparedness by everyone involved with and affected by the county's development. Hazard and mitigation awareness may result in the implementation of better building practices by contractors and developers.

## Mitigation Initiatives Priority Score Process

As a part of the planning process, the Task Force periodically reviews the proposed mitigation initiatives approved for incorporation into the plan. This assessment provides guidance to the individual jurisdictions and organizations proposing the initiatives. However, because each participating jurisdiction or organization has independent authority and responsibility for implementation of their proposed mitigation initiatives, they retain the prerogative to act in their own interests, using their own priorities for mitigation initiative implementation.

The Task Force has chosen not to establish an implementation priority for proposed mitigation initiatives beyond the aforementioned priority score. Implementation of an initiative depends heavily on a jurisdiction's current judgment of the situation and the likelihood of obtaining resources for mitigation initiative implementation. These resources may range from the normal budgeting process for the jurisdiction or organization to seeking state or federal financial or technical support for implementation of the initiative. This priority for implementation may vary in time, depending on the conditions in the community, recent disaster experience and similar factors. While generally it would be expected to consider the priority score assigned to each initiative, the priority for implementation will differ somewhat from strict application of the score, due to the importance of current conditions and circumstances in the community. Generally, implementation of an initiative begins as soon as financial resources are available.

## Effectiveness of Mitigation Initiatives

Of course, the true measure of progress in the implementation of mitigation initiatives is their success in saving lives, avoiding property damage and protecting valuable or irreplaceable resources in the community. As the mitigation initiatives that have been

incorporated into the county's LMS are implemented, there will be more opportunities to measure the "success" of the Task Force's mitigation efforts.

The best opportunity for measuring this success is to evaluate the community's experience with actual disasters and to attempt to estimate the number of lives that were saved by the implemented initiatives or the value of the property protected from disaster-related damage. Future updates of the LMS will provide such estimates of "mitigation success" based on recent disaster experience in the county. In addition, recent disaster events can be very helpful in highlighting the mitigation needs of the community based on the type, location, or magnitude of the impacts experienced. In turn, this can be a major factor in the future progress of implementation of the plan, as the Task Force considers and acts on actual disaster experience by the community. Future recommendations will be referred to a "lead" agency with the intention that the organization will use the information to propose additional mitigation initiatives for incorporation into the LMS.

The Task Force recognizes that it will take a long period of time and implementation of many if not all of the proposed initiatives approved for the LMS, to make the county a truly disaster-resistant community. However, the continuing dedication to the safety and welfare of the community shown by the participants in this planning process will make this ambitious goal possible.
